

Wittmar Engineering & Construction, Inc. and CleanAir Logix, LLC to Merge

CleanAir Marine Power Will Bring DFMV Cold Ironing™ to Market as a Newly Formed Subsidiary of CleanAir Logix,

Signal Hill, Ca. July 25, 2007 – Wittmar Engineering & Construction, Inc. (Wittmar) and CleanAir Logix, LLC, (CAL) of Oakland, CA will combine the resources of their two companies over the next 30-60 days. The powerful synergies created by this merger will allow the new company to expand their delivery of environmentally responsible logistics solutions., Under this agreement, CleanAir Marine Power, (CAMP) a subsidiary of CAL will be formed to deliver Wittmar's patented cold ironing solution to the marketplace. Terms of the merger were not disclosed.

Wittmar Engineering & Construction, Inc. is an engineering and construction company that specializes in energy analysis, self-generation and industrial facilities. Wittmar is a pioneer in Cold Ironing technologies. They have developed the Dual Frequency Multi Voltage Cold Ironing™ system, which both prevents and reduces massive amounts of ship-born pollutants in and around our seaports. With over 50 years of design, engineering, and construction experience in large industrial and commercial settings, Wittmar helps its customers capitalize on the opportunities presented by the constantly changing energy market in California and around the world.

CleanAir Logix, LLC supplies and supports transportation and related industries with logistics, services and management expertise that provides practical solutions to mitigate "quality of life" problems resulting from the movement of containerized cargo originating from, or destined to seaports and/or metropolitan centers. They are innovators in the provisioning of alternative fuels such as LNG/CNG for power to road, rail and ocean transport applications.

Both companies are committed to ensuring cleaner air for all to breathe. With common interests in cleaning up the seaport's environment and making nearby communities safer places to live, CAL is strategically aligned with Wittmar's agenda. CAMP will deliver all necessary electrical power to ships while docked in the ports. With the ability to handle all the shore-side power requirements of virtually any ship regardless of its origin or point of manufacture, CAMP is the optimal solution for reducing emissions and preventing pollution in seaports around the world.

CleanAir Marine Power has an unparalleled opportunity to supply on-demand shore-side power to ships in port. With the option to "pay as you go," customers are charged only an hourly, daily, or monthly fee for the service. CAMP stands to become the cold ironing system of choice in large part due to the low up-front investment. The CAMP solution is modular, mobile, and safely generates power over a wide range of voltages and frequencies making CleanAir Marine Power the simplest and most cost effective solution to a serious seaport pollution problem.
